

TII TENT[®]

M33
Triangulum

Note

If you want to have a beautiful pyramid tent, please adjust the pegging points and the webbing straps of the four corners in accordance with the terrain. Using brutal force will not help the tent stand tall and may damage the tent. Be sure to zip up before setting up the tent.

Tips for setting up the tent

When setting up M33, each corner of the tent must be balanced. If you want to have a beautiful pyramid tent, please adjust the pegging points and the webbing straps of the four corners in accordance with the terrain. Using brutal force will not help the tent stand tall and may damage the tent. Be sure to zip up before setting up the tent.

1. Spread out the inner tent and determine the direction of the door. Then, stake down the four corners. Do not stake down too much so you can adjust the corners easily later.

Adjust the strap to half of its length and peg through the loop at the end of the strap.

2. Spread out the outer tent and determine the direction of the front door (with the word M33). Secure the outer tent by slipping the straps at its four corners over the pegs at the four corners of the inner tent.

Adjust the strap to 90% of its length.

3. Assemble the center pole which has five holes at the bottom for height adjustment. Depending on the terrain, we suggest you adjust the height from the first hole.

4. Unzip the front door of the inner tent and the flysheet and erect the center pole in the inner tent.

-
5. Once the pole is erected, zip up the inner tent and the outer tent and then slowly tighten the straps at the four corners. Do not pull forcefully. Keep the pole erect during this process.

-
6. After the four corners are secured, you need to peg down the straps in the middle of the fabric.

7. After pegging, tidy up the tent and the tent is all set up.

4. Space

Different Variations of M33

Style 1

Unzip the side of Style 1 to spread out the wing (the slash area) and prop up the edge using the vestibule pole to turn it into Style 2 with a vestibule.

Style 2

Unzip the inner side of Style 2 and use another pole (an extra pole) to prop up the edge of the wing to turn it into Style 3 with a bigger vestibule.

Style 3

If you don't have an extra pole, you can roll up the wing and secure it with the strap on the wing to turn it into Style 4 with a semi-open vestibule.

Style 4

Interior space

The space of the inner tent is 300X300cm, enough for accommodating 4 people and storing a lot of stuff.

6. Notes

1. This tent is made of TC materials. During the initial uses, the tent must absorb moisture to help the internal fiber expand to bring out the best out of the fabric. If the fiber is not fully expanded initially, it may not provide expected waterproof performance and water may seep through the tent when raining, which is normal and will disappear after a few uses.
2. When using the product, make sure all pegs and wind-resistant guy lines are fastened so the tent can provide the best performance.
3. This product is not flame resistant. Do not light a fire inside the tent in case any irreversible or irreparable damage is caused. Be careful of fire, lack of oxygen, and carbon monoxide poisoning when using heaters in the tent. Please set up the tent in a location with good ventilation and drainage and without natural and manmade disasters.
4. Be aware of the weather. Please leave the campsite for a safe location in accordance to your evacuation plan if the weather gets bad. In the case of inclement weather or strong winds, please check your tent thoroughly to make sure all pegs and guy lines are fastened.
5. Before using the tent for the first time, please try to set up the tent and confirm the accessories and the steps for setting up the tent. To ensure the tent is used appropriately, please learn and understand how to use it. Please contact the vendor for any malfunctions.

6. Despite the good ventilation of the tent, it is not fully condensation-proof. Depending on the location of the site, condensation may occur inside the tent. Make sure the tent is properly ventilated.
7. Due to the color, thickness, and surface treatment of the fabric, wrinkles, uneven colors, knots caused by threads wound unevenly, white lines on the surface of the tape, or lines and indentation caused by folding may occur during manufacturing, which are normal and will not affect its functionality.
8. Due to the weaving methods of the fabric, there may be slight differences in colors between vertical and horizontal stripes in the sunlight which is normal and will not affect its functionality.
9. The TC fabric does not guarantee 100% water tightness because there is no water-proof tape on the seams.
10. If water seeps through the stitches or seams, you can enhance the tent using tent seam sealers sold on market.

T/C Mixed Cloth

- More delicate and soft touch
- Better heat and light prevention
- High breathability

This tent deploy tetoron and cotton mixed cloths (T/C Mixed Cloth) with soft touch and good heat/sunlight proof performance. The T/C mixed cloths also known as melamine sponge can absorb water with cotton fabric after multiple uses, making the texture more firm. With the water-repellent surface and light adhesive glue of the inner layer, the water resistance could reach 350mm~500mm, providing the best user experience.

The brand-new tent may have rain seepage because the cloths haven't reached the best performance. The new tents cannot support heavy rain at the very beginning, they are required multiple uses to achieve the best performance.

Emergency Responses

With proper use and maintenance, the TiiTENT product can stay in good quality. Please be aware of the following important information to prevent damage to the product:

1. Accidents may damage the poles and fabric. Please bring repair kits (duct tape, guy lines, and tubes for reinforcements) with you at all times for immediate use.
2. If damage to the product is not fixed immediately, it may result in serious and even irreparable harm. If the fabric is torn or broken, please place duct tape over both sides of the fabric to prevent the damage from spreading or remove the damaged fabric.
3. Prolonged exposure to sunlight can cause colors to fade, weakening the strength of the fabric. Please bear in mind that the tent is not intended for use in prolonged settings in which they remain exposed to the sun. When the degradation caused by sunlight exceeds the endurance limit of the fabric, the damage will become permanent.
4. If the product is constantly damp, mold, stinky smells, color bleed, or fabric degradation may occur. Therefore, please make sure the product is fully dry before attempting to store it.
5. If the fabric becomes moldy due to humidity, the mildew might not be removed. However, please remove the mold on the surface and disinfect the fabric with alcohol. If the fabric is damaged by mold, leakage will occur.

Conditions Not Covered by our Warranty

Our products have undergone a rigid quality control process. Our warranty covers all the defects derived from errors during production; however, the following problems are not covered by our warranty.

Sorry for the inconvenience.

- 1. Damage caused by unexpected incidents.**
- 2. Damage due to improper use or undue force.**
- 3. Degradation of the materials over time or due to exposure to UV light.**
- 4. Damage caused by defects not associated with production.**
- 5. Damage from remodeling.**

If you have any questions regarding the warranty, please contact the retailer where you have bought the product from for after-sales services.
